Hiring Manager
PERSOL
Malaysia

Subject: Application for Application Administrator (Remote)

Dear Hiring Manager,

I am excited to apply for the **Application Administrator (Remote)** position at PERSOL. With over 5 years of experience spanning software engineering, IT system support, and project coordination, I have developed strong skills in maintaining applications, troubleshooting technical issues, and supporting users — all of which align closely with this role.

In my current position as **Assistant Project Manager** / Software Engineer at Ingenious Technology Solutions, I manage multi-module systems, monitor application performance, handle issue escalations, and coordinate with teams and clients to ensure smooth operations. I also have hands-on experience with Node.js, Express.js, React, Laravel, MySQL, and AWS S3, giving me a clear understanding of system architecture and potential technical issues.

Previously, I worked as a Software Engineer at Airei Sdn Bhd, where I developed and maintained web applications while providing client support and resolving system issues. My background in project documentation, reporting, and cross-team coordination further strengthens my ability to manage applications effectively.

I am drawn to PERSOL for the opportunity to work remotely while contributing to a well-structured IT environment. I am confident that my combination of technical proficiency, problem-solving, and operational coordination will allow me to support your systems and users efficiently.

I would welcome the opportunity to discuss how my experience aligns with the Application Administrator role and how I can contribute to the success of your company. Thank you for considering my application.

Sincerely,
Nabihah Taquddin Azmy
