Subject: Application for IT Application Developer cum Tech Support

---

Dear Hiring Manager,

I am writing to apply for the IT Application Developer cum Tech Support position. With over 5 years of experience in software development, system support, and project coordination, I am excited about this hybrid role that combines application development with hands-on IT support.

In my current role as Assistant Project Manager / Software Engineer, I design, develop, and maintain web applications, perform system analysis, troubleshoot issues, and work closely with users and stakeholders to resolve technical problems. I have hands-on experience with PHP, JavaScript, SQL, API integration, Git-based version control, and debugging, and I am comfortable building scalable, user-friendly systems while ensuring stability and performance.

Alongside development work, I regularly provide first-level technical support, handle issue tracking, assist with system access and user guidance, and prepare technical documentation. This has strengthened my ability to communicate clearly with users, prioritize issues, and resolve problems efficiently in a support environment.

I am particularly drawn to this role as it allows me to contribute both as a developer and as a support resource, while continuing to learn new technologies and improve system usability. I am confident that my technical foundation, adaptability, and strong problem-solving skills will allow me to add value to your MIS team.

I look forward to the opportunity to discuss how I can contribute to your company’s application development and IT support operations.

Sincerely,
Nabihah Taquddin Azmy
