Hiring Manager
SCHOTT Glass (M) Sdn Bhd
Kulim, Kedah

Subject: Application for IT/OT Administrator

Dear Hiring Manager,

I am writing to apply for the IT/OT Administrator position at SCHOTT Glass (M) Sdn Bhd. With over 5 years of experience in software engineering, system administration, and IT support, I am highly interested in contributing to a manufacturing environment where reliable and secure IT/OT systems are critical to production operations.

In my current role as Assistant Project Manager / Software Engineer, I support and maintain client–server systems, troubleshoot incidents and system issues, manage application deployments, and ensure system stability across multiple modules. I work closely with internal users, vendors, and central teams to resolve issues, manage changes, and keep system documentation up to date. My experience includes working with networks (TCP/IP), server environments, virtualization concepts, SQL databases, API integrations, and structured issue tracking.

I am particularly interested in this role due to its focus on production-relevant IT systems, data connectivity, and IT/OT security. While my background is rooted in software and system support, I am highly adaptable and eager to deepen my exposure to MES, SAP interfaces, PLC environments, and manufacturing processes. I am comfortable learning new technologies and applying security and best practices to ensure system integrity and operational continuity.

I am drawn to SCHOTT’s strong engineering culture and global manufacturing presence. I am confident that my technical foundation, analytical mindset, and collaborative working style will allow me to contribute effectively to your IT/OT operations.

I look forward to the opportunity to discuss how my experience and willingness to learn can support SCHOTT’s production and digital initiatives.

Sincerely,
Nabihah Taquddin Azmy
