Hiring Manager
Cytron Technologies Sdn Bhd
Penang, Malaysia

Subject: Application for Software Architect Position

Dear Hiring Manager,

I am writing to apply for the Software Architect position at Cytron Technologies. I understand you are specifically looking for someone who can bridge the gap between software and hardware, a challenge that perfectly aligns with my background and current projects.

For the past five years, I have built a strong foundation in full-stack engineering and system architecture. Serving as the technical lead for a 14-module enterprise platform (MECHIS), I managed end-to-end SDLC workflows, scalable backend development (Node.js, NestJS, MySQL, MongoDB), and DevOps workflows using Jira and GitHub.

Building on this software discipline, I have recently focused on embedded hardware integration. I have successfully designed touchscreen GUIs for ESP32-S3 AMOLED displays, built IoT pipelines for real-time sensor data streaming over BLE, and deployed lightweight machine learning models to microcontrollers using Edge Impulse.

Because I understand both how to build robust web APIs and how to handle edge device constraints, I can design systems where Cytron's hardware and software communicate seamlessly. I am a fast learner who adapts quickly to new embedded technologies, and I am highly motivated to bring my systems experience to your team.

I have attached my resume for your review and would welcome the opportunity to discuss the role with you further.

Sincerely,
Nabihah Taquddin Azmy
