Hiring Manager / Recruitment Team Calctronic Technology Sdn Bhd

Subject: Application for Software Engineer Position

Dear Hiring Manager,

I am writing to express my strong interest in the **Software Engineer** position at Calctronic Technology Sdn Bhd. With a Bachelor's Degree in Software Engineering from Universiti Putra Malaysia (UPM) and over 5 years of professional experience in full-stack software development, system architecture, and requirements analysis, I am eager to contribute to Calctronic's innovative industrial automation and software solutions.

Calctronic's focus on building high-performance software, developing intuitive Human-Machine Interfaces (HMI), and integrating applications with sensors and automated equipment closely aligns with my technical competencies:

- **Programming & System Integration:** Proficient in C/C++, Python, JavaScript, Node.js, and relational database design (MySQL). I have extensive experience building RESTful APIs, handling structured JSON data exchange, and establishing communication interfaces for backend applications.
- **HMI, Embedded AI & Sensor Data Handling:** My hands-on work with **Edge Impulse (TinyML / Edge AI)** for sensor data processing and embedded systems basics provides me with a strong understanding of handling real-time data streams, structuring telemetry, and designing reliable user interface workflows for hardware integration.
- **Full SDLC & Technical Documentation:** I have driven full lifecycle development across multiple projects—from gathering stakeholder requirements and authoring Functional Specification Documentation (FSD) to defining system architecture, conducting code reviews, and creating comprehensive developer and user manuals.
- **Troubleshooting & System Reliability:** Proven track record in isolating software defects, executing User Acceptance Testing (UAT), and deploying fixes to staging environments to shield production systems from operational issues.

Having managed multi-module software architectures and coordinated cross-functional engineering efforts in Penang, I thrive in fast-paced environments where software connects complex digital and physical processes. I am confident that my technical foundation and problem-solving drive will make an immediate impact on Calctronic's development team.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my software engineering background and integration skills align with your upcoming project goals.

Sincerely,
Nabihah Taquddin Azmy
