Hiring Manager
Promserv Sdn Bhd

Subject: Application for Software Engineer Role

I am writing to express my enthusiastic interest in the Software Engineer position at Promserv Sdn Bhd. With a Bachelor's Degree in Software Engineering from Universiti Putra Malaysia (UPM) and over 5 years of professional experience building and supporting full-stack web applications, I am eager to contribute to Promserv's vision of automating IR 4.0 big data solutions and cloud-connected IoT environments.

Throughout my career as a Software Engineer and System Analyst, I have gained hands-on expertise across the full software development lifecycle:

- **Full-Stack Application Development:** Proficient in JavaScript, Node.js, Express, React, C/C++, and relational databases (MySQL). I have independently built and deployed full-stack web systems from scratch, including an in-house ticketing platform featuring automated SMTP notification workflows.
- **IoT & Embedded Intelligence (Edge Impulse):** To stay at the forefront of IR 4.0 innovations, I have actively expanded my skills into embedded AI using **Edge Impulse**, learning how to train, optimize, and deploy machine learning models directly onto resource-constrained IoT edge devices.
- **Agile Problem Solving & QA:** Experienced in translating complex product requirement analysis into actionable code, defining test cases, executing UAT, and documenting developer guides.

Promserv's focus on building smarter, safer automated environments closely aligns with my technical passion for blending modern full-stack web architectures with edge-connected IoT systems. I am confident that my strong analytical mindset, adaptability, and proactive drive to learn will enable me to make an immediate impact on your team.

Thank you for your time and consideration. I welcome the opportunity to discuss how my background and technical capabilities align with Promserv's upcoming engineering goals.

Sincerely,
Nabihah Taquddin Azmy
