Hiring Manager / Recruitment Team TECAN CDMO SOLUTIONS PN SDN. BHD.

Subject: Application for Software Engineer Position

Dear Hiring Manager,

I am writing to express my strong interest in the **Software Engineer** position at Tecan CDMO Solutions. With a Bachelor's Degree in Software Engineering from Universiti Putra Malaysia (UPM) and over 5 years of hands-on experience in full-stack web development, database optimization, legacy system modernization, and system analysis, I am eager to contribute to Tecan's next-generation manufacturing applications and digital solution rollouts.

Tecan’s focus on modernizing legacy tools into scalable web architectures, optimizing database schemas, and streamlining manufacturing workflows matches my core technical strengths:

- **Legacy Modernization & Web Architecture:** Experienced in building modern web platforms using React, JavaScript, Node.js, and RESTful APIs. My strong programming foundation in C/C++ and Object-Oriented principles enables me to quickly adapt to Tecan’s C# / .NET development stack and transition legacy system logic into high-performing web architectures.
- **Database Optimization & Data Pipelines:** Skilled in database modeling, writing complex SQL queries, and optimizing performance. At Ingenious Technology, I successfully managed system data health and led a 1TB MySQL database capacity expansion project to maintain service reliability.
- **Workflow Analysis & Automation:** Proven track record in gathering user requirements, translating complex business processes into Functional Specification Documentation (FSD), and building custom tools—such as an automated ticketing system with role-based access control and notifications.
- **Agile, Root-Cause Analysis & Support:** Experienced in Agile/SDLC workflows, performing root-cause analysis on production bugs, executing UAT cycles, and maintaining comprehensive technical documentation for both end-users and developer teams.

Having built a solid foundation managing enterprise software systems, data workflows, and cross-functional requirements right here in Penang, I am confident in my ability to help Tecan modernize applications and enhance operational efficiency.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my software engineering and database optimization background align with your team's goals.

Sincerely,
Nabihah Taquddin Azmy
