Hiring Manager
Dell Global Business Center Sdn Bhd

Subject: Application for Software System Engineer Position

Dear Hiring Manager,

I am writing to express my enthusiastic interest in the Software System Engineer position at Dell Global Business Center. With a Bachelor's Degree in Software Engineering from Universiti Putra Malaysia (UPM) and over 5 years of hands-on experience in full-stack web application development, quality assurance (UAT), and system analysis, I am eager to contribute to Dell's cutting-edge software solutions.

Dell's focus on building scalable system software across Linux, Windows, embedded systems, and AI-assisted tools strongly resonates with my technical background and recent skill expansions:

- **Full SDLC & System Reliability:** Across my roles as a Software Engineer and Assistant Project Manager, I have contributed to every phase of the software lifecycle—from gathering requirements and writing technical specifications (FSD) to feature development, testing, and production bug troubleshooting. I independently designed and deployed an in-house ticketing system using Node.js/Express with automated workflows.
- **Testing, QA & Developer Documentation:** I prioritize code quality and release reliability by authoring comprehensive test cases, validating fixes in staging, managing JIRA issue tracking, and keeping thorough technical documentation for engineering teams.
- **Data Engineering & AI-Assisted Context:** Beyond core web technologies (JavaScript, React, Node.js, C/C++, MySQL), I have actively engaged with embedded AI and context-driven workflows through **Edge Impulse**, learning how to structure sensor data pipelines and deploy machine learning models onto edge hardware.
- **Collaborative Requirement Gathering:** I excel at working with cross-functional stakeholders to define product features, prioritize enhancements, and ensure on-time delivery without compromising system stability.

Having built a solid foundation bridging technical execution with reliable system delivery in Penang, I am excited about the prospect of joining Dell's Software System Engineering team to drive innovation and operational excellence.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my background in software engineering, testing, and data workflows aligns with Dell's upcoming product goals.

Sincerely,
Nabihah Taquddin Azmy
