Hiring Manager
Emerson

Subject: Application for Staff Software Engineer Position

Dear Hiring Manager,

I am writing to express my interest in the Staff Software Engineer position at Emerson in Bayan Lepas. With a Bachelor's Degree in Software Engineering from Universiti Putra Malaysia (UPM) and over 5 years of experience in full-stack development, software testing, and system analysis, I am keen to contribute to Emerson's engineering team.

My background focuses on practical software execution, system reliability, and team collaboration:

- **Software Logic & Engineering Practices:** Solid understanding of object-oriented concepts, database design, and programming using JavaScript, Node.js, Python, C/C++, and SQL. I routinely leverage modern tools and documentation to ensure clean, maintainable code.
- **Testing & System Reliability:** Hands-on experience across the full software lifecycle—writing technical specs (FSD), running User Acceptance Testing (UAT), isolating bug root causes, and keeping documentation up to standard.
- **Embedded AI & Hardware Data:** Worked with C/C++ logic and sensor data pipelines through hands-on learning in **Edge Impulse (TinyML / Edge AI)**, giving me a clear foundational understanding of software interacting with physical data.
- **Cross-Functional Coordination:** Experienced in serving as a technical point of contact (PIC), working alongside developers, testers, and business stakeholders to keep project deliverables aligned.

I take a practical, continuous-learning approach to software engineering and adapt quickly to new environments, codebases, and toolchains. I would welcome the opportunity to contribute my skills and support Emerson's software initiatives.

Thank you for your time and consideration.

Sincerely,
Nabihah Taquddin Azmy
